# PD10E-R INFRASUB<sup>TM</sup>

SFIF-POWERED

#### **APPLICATIONS**

Portable Sound Reinforcement
Portable DJ Systems
Portable Musical Instrument Systems

Theatrical Sound Reinforcement Low Frequency Special Effects

#### **DESCRIPTION**

The PD10E-R is a self-powered double 10" bass system designed for portable use. The PD10E-R provides perfectly flat response down to 8 hertz when used in conjunction with the 8 hertz Integrator. Our external rack mount Infra-MXB Integrator is recommended to drive a line level Infra™ processed signal to one or more PD10E-R systems. The PD10E-R offers a black Ro Tex™ finish and a black coated steel grille.

The audio input incorporates an InGenius® balanced line receiver, providing very high common mode rejection, to eliminate noise often present in systems with less optimized grounding and wiring schemes. The internal Minima 7™ amplifier incorporates a high efficiency low power consumption green design with advanced digital switching to automatically switch and accept line voltage from 100 to 240 volts.

#### **SPECIFICATIONS**

#### System Type

Infrasub™ sealed chamber 1.4 ft<sup>3</sup>

#### **Enclosure**

18 mm 13-ply birch plywood

#### **Finish**

Black Ro  $\mathsf{Tex}^\mathsf{TM}$  true water born environmental finish

#### Grille

16 Gauge black powder coated perforated

#### **Low Frequency Components**

2 - EL-10 10" Infra™ extended low frequency transducer cone, 2.5" Voice coil, 68 oz Magnet

#### **Input Connector**

XLR 1/4" combo with XLR loop through

#### Internal Amplification

Minima 7™

#### Input Impedance

48K ohms

#### Input CAL Sensitivity

+4 dBu

### Maximum Continuous Amplifier Power

750 W

#### High Pass Filter

Switchable: -6 dB @ 8 Hz; @ 50 Hz; @ 95 Hz

#### **Overload Protection**

Internal Dynamic Filter™ protection

#### LED Indicators

Green - On

Yellow - Dynamic Filter <sup>™</sup> threshold

#### Mains Voltage Requirements

Auto sensing 100 / 120 / 240 V

#### **Mains Current Requirements**

2.3 A @ 120 V 1.2 A @ 240 V

#### Hardware

2 - Recessed handles Optional fly points

#### **Crossover Type**

Requires external Infra™ integrator

#### Frequency Response

 $60 \text{ Hz to } 250 \text{ Hz } \pm 3 \text{ dB}$  8 Hz to  $95 \text{ Hz } \pm 3 \text{ dB}$  with external Infra<sup>TM</sup> integrator

#### **Low Frequency Limit**

8 Hz

## Maximum Calculated Continuous Acoustic Output

Half Space @ 1 Meter 10 Hz - 84 dBSPL 20 Hz - 96 dBSPL 40 Hz - 108 dBSPL

80 Hz - 119 dBSPL

#### Polarity<sup>a</sup>

A positive asymmetrical signal applied to pin 2 will result in a positive asymmetrical acoustical pressure

#### **Dimensions**

13" h x 22.5" w x 13" d 33 cm x 57 cm x 33 cm

#### Weight

45 lbs 20 kg

#### **Custom Finishes**

Optional custom finishes include white or unfinished ready to paint.

## PD10E-R INFRASUB™

#### **ABOUT INFRASUB™ TECHNOLOGY**

Almost all designs and specifications for subwoofer systems are fixated on the frequency response domain. However, the impression of power and quality of a loudspeaker is equally related to the time domain. The long wavelengths associated with low frequencies make this particularly true with subwoofers. Likewise, the maximum SPL is not a very reliable way to judge the impact of a subwoofer. A poor time domain performer will not have the same impact or natural musically connected sound as a Time-Aligned<sup>TM</sup> Infra<sup>TM</sup> system. The reason that an Infra<sup>TM</sup> subwoofer sounds dramatically better is because of their superior time

domain performance, as well as their extended low frequency response. The Infra™ subwoofer maintains the bass energy in a tight packet, aligned with the upper range signal, providing a greater body impact and a seamless musical connection with the main loudspeakers. Conventional subwoofer designs perform poorly in the time domain because designers have used methods that sacrifice the phase response for more control over the frequency response (e.g.: steep low pass filter slopes, vented speaker enclosures, and narrow bandwidth systems). With the Infra™ technique, we do not degrade the phase response while extending the frequency response.

While the Infra™ dual Integrator does function as the system crossover, it does so without using a conventional low pass filter. The Infra™ integrator applies an inverse electrical response to the acoustical response of the Infra™ loudspeaker in its sealed enclosure. This provides the extended frequency response while maintaining the hi fidelity sound quality associated with a sealed box design. This design approach requires the most amplifier power to be used at the lowest frequency, thus we implement the Dynamic Filter™ technology to protect the system from the bottom up, affecting the lowest frequency first and leaving the middle and upper bass unaffected. The Dynamic Filter™ is a complimentary technology to the Infra™ system taking unique advantage of the Infra™

design approach, to implement a reliable protection scheme that is transparent and inaudible to the listener. When comparing a genuine Bag End® Infra™ loudspeaker system to any other, our technology and design is easy to hear and appreciate. The dramatic clarity, realism, and overall pleasant sound of an Infra™ system is well noted throughout the world.

#### ABOUT MINIMA 7™ SELF POWERED

The Minima 7™ amplifier is both a high fidelity and a high efficiency amplifier. With efficiency well over 80%, it provides more power to the loudspeakers, and creates less heat in the amplifier. In real world applications there is practically no heat emitted from the amplifier and thus it requires no cooling fan. The AC power input automatically adapts to any voltage between 88 and 270 volts
